

Book Title: Bayesian model selection and statistical modeling
Series: Statistics: A Series of Textbooks and Monographs
Author: Tomohiro Ando
Publisher: CRC Press
ISBN: 9781439836149
ISBN 10: 1439836140
Publication Date: May 27, 2010
Number of Pages: 300
Binding(s): Hardback

This folder provides R code for several worked examples that appear in the book

Chapter 1

[Chapter1 Section1.1](#) Analysis of Nikkei 225 index data

Chapter 2

[Chapter2 Section2.8.1](#) Subset variable selection

[Chapter2 Section2.8.2](#) Smoothing parameter selection

Chapter 3

[Chapter3 Section3.1.3](#) Asymptotic normality of the posterior mode: Comparison of the constructed density function of the posterior mode

[Chapter3 Section3.2.2](#) Bayesian central limit theorem: Poisson distribution with conjugate prior

[Chapter3 Section3.3.3](#) Laplace method: Bernoulli distribution with a uniform prior

Chapter 4

[Chapter4 Section4.2.4](#) Gibbs sampling for seemingly unrelated regression model

[Chapter4 Section4.6.1](#) A direct Monte Carlo algorithm for linear regression model

Chapter 5

[Chapter5 Section5.2.3](#) Bayes factor: Poisson models with conjugate priors

Chapter5 Section5.3.1	Marginal likelihood: Bernoulli distribution with conjugate prior
Chapter5 Section5.5.1	Evaluation of the approximation error of BIC
Chapter5 Section5.5.2	Link function selection for binomial regression with BIC
Chapter5 Section5.5.4	Survival analysis with BIC
Chapter5 Section5.6.1	Nonlinear regression models using basis expansion predictors with GBIC
Chapter5 Section5.6.2	Nonlinear multiclass classification using basis expansion predictors with GBIC
Chapter5 Section5.8.3	Bayesian spatial modeling
Chapter5 Section5.9.3	Bayesian sensitivity analysis of Value at Risk

Chapter 6

Chapter6 Section6.1.1	Bayesian analysis of multinomial probit models
Chapter6 Section6.2.1	Bayesian analysis of the ordered probit model
Chapter6 Section6.3.1	The marginal likelihood evaluations for seemingly unrelated regression model
Chapter6 Section6.7.1	Bayesian analysis of the probit model

Chapter 7

Chapter7 Section7.2.1	Hierarchical Bayesian modeling for logistic regression
Chapter7 Section7.4.1	P-spline regression model with Gaussian noise
Chapter7 Section7.4.2	P-spline logistic regression modeling with MBIC
Chapter7 Section7.5.2	Nonlinear multiclass classification using basis expansion predictors with GIC
